(a) Fixed-weight ablation
share of prediction variance
features retained, k (log scale)
k = 29: 59%
k = 9: -62%
top-k features
random readout, Gaussian
random readout, permuted
(b) The attributed features are nameable
features (log scale)
other 2,608 features
the 29 attributed
variance explained by signal statistics (R^2)
